

# IMV imaging Academy In-Practice Training

Experience our tailored in-house training approach, **designed in collaboration with you** to achieve **meaningful learning** and **measurable outcomes** for your team.

## Fully bespoke

Blended learning package which can be adapted at team and individual level.

Designed by a team of experienced imaging educators, the course structure is tailored to allow maximum flexibility whilst maintaining excellent learner outcomes

## Flexible eLearning

Immediate support to your team which enables self-directed learning. Achieve learning outcomes for your team which are immediately applicable in practice. Four compulsory online modules selected by the Academy tutors ensure that you and your practice team get the most out of the dedicated practical session

## Practical Training Session

Led by experienced IMV imaging Academy tutors. All imaging equipment provided, or use your own! Your requirements will be discussed in advance, and an individually tailored itinerary and objectives will be recommended by our team of Academy tutors

## What is the IMV imaging Academy?

We are Europe's largest provider of veterinary imaging CPD. Created by a core team of vets with expertise in diagnostic imaging and education. It is the home to an innovative and leading online learning system designed to provide the best learning experience and learner outcomes.

We offer a **fully customisable** package for practices of all sizes.

*Our purpose is to provide our clients and the wider veterinary industry with the skills and confidence required to get the most out of their imaging equipment.*

## What previous learners had to say about our bespoke CPD courses ...

"It was tailored to our needs and the instructor could focus on each 'student' as it was only 3 of us."

"I thought this was excellent. The most useful ultrasound course I have done in 30 years of general practice."

"Easy to follow online modules with great content and very thorough and well explained practical sessions."

"I loved being shown how to use our in-house ultrasound machine controls to ensure I'm able to get the best images possible and how to systematically scan the abdominal organs."

"Tailored to what we want out of it, very practical to apply in GP setting."

"Doing the theory before the practical really helped and taught me a lot especially the videos, a lot of content but invaluable and totally what I needed to understand a systemic approach."
